叶 接 , 其它 叶 重量比 , 性矩也小. 叶片和叶柄等 装件的 心力通 平面推力球 承 至叶 的支承 上. 叶 装件在出厂前已 行多次 平衡.

1, according to KM007 more balanced

(1) Maximum working speed of the impeller 1470r/min

(2) The balance level is 4750g-mm on each side according to the residual unbalance allowed by G1.6, and the weight is balanced on both sides

(3) The thickness of the balance weight is not more than 10mm

2. Weld quality shall be constructed and inspected according to the third part BS and BK of DIN8563

3, welding slag should be removed after welding, and stress annealing treatment

4, welding quality according to JB/T10213-2000 regulations

5, the welding seam of the tray, cover plate and wheel hub should be 100% inspection

6, after the completion of processing, thoroughly clean up, no debris left

The impeller is welded structure, which is lighter in weight and smaller in inertia moment than other structure impellers. The centrifugal force of the blade and petiole assembly is transmitted to the support ring of the impeller through the flat thrust ball bearing. The impeller assembly has been dynamically balanced for many times before leaving the factory.
